Tired of manually mining for resources in Minecraft? This book will teach you how to build a fully automated security camera auto miner that will do the work for you! You'll also learn how to build a new piglin bartering farm that will help you get the most out of your bartering sessions.

Security Camera Auto Miner

The security camera auto miner is a fully automated mining machine that uses a security camera to detect ores. When an ore is detected, the machine will automatically mine it and collect the resources. The machine is very efficient and can mine a large number of ores in a short amount of time.

To build the security camera auto miner, you will need the following materials:

- 1 security camera
- 1 redstone comparator
- 1 redstone repeater
- 1 piston
- 1 block of TNT
- 1 diamond pickaxe
- 1 bucket of water
- 1 lever

Once you have gathered the materials, you can follow these steps to build the machine:

1. Place the security camera on a block of dirt. 2. Place the redstone comparator next to the security camera. 3. Place the redstone repeater next to the redstone comparator. 4. Place the piston next to the redstone repeater. 5. Place the block of TNT on top of the piston. 6. Equip the diamond pickaxe and place a bucket of water on the ground. 7. Place the lever on the ground.

The machine is now complete. To use the machine, simply flip the lever. The machine will start mining and will continue to mine until it runs out of power. The machine will automatically collect the resources and store them in a chest.

Piglin Bartering Farm

The piglin bartering farm is a new type of farm that allows you to barter with piglins for valuable items. The farm is very efficient and can produce a large amount of items in a short amount of time.

To build the piglin bartering farm, you will need the following materials:

- 1 nether portal
- 1 gold ingot
- 1 piece of coal
- 1 piece of quartz
- 1 piece of crimson fungus
- 1 piece of warped fungus
- 1 chest

Once you have gathered the materials, you can follow these steps to build the farm:

1. Create a nether portal.
2. Place the gold ingot, coal, quartz, crimson fungus, and warped fungus in the chest.
3. Place the chest next to the nether portal.
4. Stand next to the chest and interact with the piglins.
5. The piglins will offer you a variety of items to barter for.
6. Select the items you want to barter for and click the "Trade" button.

The farm is now complete. You can now barter with the piglins to get the items you need.

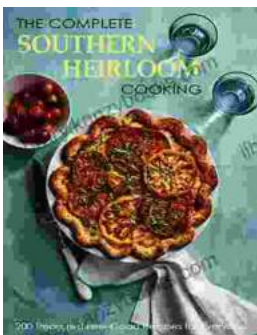

The security camera auto miner and piglin bartering farm are two great ways to automate your Minecraft experience. These machines can save you a lot of time and effort, and they can help you get the resources you need to build your dream world.
